

What is JIRA?

JIRA is a bug tracking and project management tool used to log, track, and manage defects and tasks during the software development lifecycle.

What is a Test Management Tool?

A test management tool is used to manage test plans, test cases, test execution, and generate test reports.

Have you used any Bug Tracking Tools?

I have basic knowledge of JIRA and understand how to log bugs, update defect status, set severity and priority, and track defects through the defect life cycle.

What is Selenium?

Selenium is an open-source automation testing tool used to automate web applications across different browsers.

What is an Automation Framework?

An automation framework is a structured approach that provides guidelines, reusable components, and standards to write and manage automation test scripts efficiently.

What is API Testing?

API testing verifies whether APIs are functioning correctly by validating requests, responses, data accuracy, and status codes without using the user interface.

What is Postman?

Postman is an API testing tool used to send requests, validate responses, and test REST APIs.
